🏁 Results for the **Qualification Round** of the 6th RoboRacer Sim Racing League are out!

🎉 We're excited to announce that **32 teams** from different parts of the world have qualified for the **Competition Round** of the 6th RoboRacer Sim Racing League! 🚀 🌍

🔗 Check out the **full leaderboard** here: <https://lnkd.in/eRfMYj53> ✅

🌟 This edition also witnessed **two new milestones**:

📊 With **32/55 qualified teams**, this is officially the **highest** number of teams in all previous iterations of the competition! 🌍 🙌

⚡ Team **NTU DeepSpeed** from **Nanyang Technological University Singapore** shattered all previous qualification records, clocking an incredible **best lap time of 4.94 seconds** on the practice track — **the fastest lap ever recorded!** 🚀 🌟

Record Breaker!

ROBORACER @ IROS 2026			
time-attack race. Here are the official results:			
RANK	TEAM NAME	RACE TIME	COLLISION COUNT
01	NTU DeepSpeed	49.83 s	0
02	IDEA_LAB	60.99 s	0
03	Penguin	64.61 s	0
04	Barq Racing	65.67 s	0
05	E-Rally	67.33 s	0

18.3% ahead with 0 crashes!

Past Events & Competitions

2026 Feb
Workshop & Hackathon
📍 Singapore

2026 Aug
IFAC
29th Roboracer
15 out of 55 teams
📍 Busan, Korea

2025 Nov
ICCAS
4th F1Tenth Championship
📍 Incheon, Korea

2026 June
ICRA
27th Roboracer
9th in Classic Cup
📍 Vienna, Austria

Sim Racing

- **5th RoboRacer Sim Racing League (ICRA 2026)**
 - 6th out of 78 teams in Qualification Race
 - 11th in Final Stage Race
- **6th RoboRacer Sim Racing League (IROS 2026)**
 - 1st out of 55 teams in Qualification Race (RECORD BREAKER)
 - Stay tuned for our Final Stage Race result!

02

The Tech

LEARN FAST, DRIVE FAST

What you will learn?

Autonomous Systems Architecture

Get hands-on experience in designing and integrating perception, Motion Planning, and Control algorithms.

Sim-to-Real Deployment:

Bridge the critical gap between simulation environments and physical hardware

Embedded Software & ROS 2

Master industry-standard tools including ROS 2, Linux, C++, and Python

High-Performance Teamwork

Collaborate in a fast-paced, multidisciplinary environment to solve complex engineering bottlenecks

Our Race Stack

03

THE HACKATHON

THE RULES

Don't tamper with the judging environment!

Teams

3-5 per teams

If you can't form one, we will match teammates for you

Time

You will have one month starting from today
The submission deadline is **18/10/2026 23:59**

AI Usage

AI usage is **allowed**, but you explain how your code works during the interview

HACKATHON SCORING

50% Min-time lap

Team with the fastest lap is marked as 50%, scores of other teams will be
 $t_{\text{fastest}}/t * 50\%$

50% Min-time 10 laps

Defined as the time it takes to finish 10 laps, one warm-up lap will be granted. Team with the fastest time is marked as 50%, scores of other teams will be
 $t_{\text{fastest}}/t * 50\%$

Penalty

Collisions with the car will incur a 10 SECOND PENALTY.
If you collide more than 10 times then you are DISQUALIFIED.

DUAL TRACK

You will submit your track selection when you register for the hackathon, for teammate matching you will be matched with those who chose the same track. Technical details of the hackathon will be uploaded as a document into the telegram chat later

Recruitment Process

Registration

Register
By 24/09 23:59

Hackathon

Submit
By 18/10 23:59

Interview

Applicants are shortlisted
based on their CV and
hackathon rankings

Acceptance!

The Process is Holistic

Who are we looking for?

Self-motivated learners

If you are good at using google or AI to search for info, you are the right person!
*You are encouraged to search for existing solutions on the web for the hackathon

Software engineers

Experience in ROS2 / autonomous control / perception / localization is encouraged.

Hardware engineers

Hackathons only highlights the software talents, include your hardware expertise in your CV!

Smart AI users

Know how to use AI to intelligently accomplish a task while knowing what the AI is doing. Any AI models are welcome.
